

SKYLIGHT INTERIOR CLEANING & CARE

The all-plastic interior bezel of your DUO Form skylight is made of rugged ABS polymers, so taking care of your skylight's bezel surface is a breeze. With proper care and attention, it can retain its "brand new" look for a long time by using the recommended cleaning products according to the manufacturers' instructions.

ABS PLASTIC BEZEL NORMAL CLEANING:

The following commercial cleaning products are readily available and are quite safe when properly used:

DUO Plastic Cleaner for Bath & Kitchen (available online at www.duoformplastics.com/store/), *Fantastik®*, *Ivory®* soap (liquid or flake) in a water solution, *Scrubbing Bubbles®*, *Pine Sol®*, *Formula 409®*, *Windex®*, *Simple Green®*, and *Spic and Span®*. **NOTE: Cleaning products must be bleach and ammonia free.**

HEAVY-DUTY CLEANING:

The following commercial cleaners are recommended:

OOPS!®, Soft Scrub®, Turtle Wax®, Turtle Wax® Bug & Tar and Tree Sap Remover

After cleaning, all surfaces should be rinsed with clean water.

CAUTION: Do not use any cleaners containing citrus oils as this could cause severe damage to your unit. Cleaners containing acetone or any products that contain bleach, ammonia, esters, ethers, ketones, aromatic and chlorinated hydrocarbons, and isopropanol in concentrations greater than 25% should also be avoided as use of any of these materials could damage the surface of your enclosure. Mineral spirits should also be avoided.

POLYCARBONATE SKYLIGHT NORMAL CLEANING:

Please refer to the instructions on the reverse of this page for Skylight Exterior Cleaning and Care.

After cleaning, all surfaces should be rinsed with clean water.

CAUTION: System compatibility is essential to ensure long-term performance of polycarbonate skylights. Do not expose polycarbonate skylights to solvents such as acetone, toluene or methylene chloride. Before choosing a sealant for your skylight installation, check the sealant's compatibility with polycarbonate.
